Defensive End

- Maintain surface finish on profiles
- Improve plant housekeeping by eliminating the use of cardboard
- Operating temperatures up to 425°F (220°C)
- Drastically reduce quantity of damaged profiles during heat treat process
- Aramid stitching, on sewn sleeves, for long service life
- Flat, smooth, welded seams, designed for automatic stacking equipment, give superior performance in all applications.

Tight End (shrink sleeves)

- Shrink materials lock sleeves in place on spacer bar to allow proper operation of automatic stacking equipment
