

Pad Mount Containment Kits

Pad Mount Containment kits are custom designed to capture any leakage from underground transformer vaults. The containment consists of a prefabricated unit

featuring 4 oil immobilizing mats secured between two layers of impermeable liner in specifically chosen locations and size to maximise drainage without sacrificing performance. The timely work is done in-house making the installation of the containment take only 1 day with minimal on-site sealing. This product saves time and money and can be installed at the same time as the transformer vault.
