

# Spill Trays

Spill trays are custom designed to be mounted underneath radiators, valves and special equipment that are prone to leaks. The spill trays are shipped 100% complete with mounting hardware included. Most commonly mounted onto existing equipment these can also be designed to be freestanding. The spill trays capture drips from leaky equipment and are drain-free making them ideal for outdoor conditions. The advantage of the spill tray is that water will drain through the material but oil will be

## How it Works

Oil leaking from equipment is absorbed by the adsorption layer of the tray. When the adsorption layer is saturated, additional oil seeps downward, reacting with the oil congealing mat sealing the tray. Based on the leak rate, SorbTray can be designed to remain in place functioning effectively for a prolonged period of time. Once the tray seals, the contents can be removed and disposed of, following required corporate oil waste management guidelines. The old cartridge can be replaced with fresh material and returned to service.
